Collapses, cracking and a natural avalanche on Mineral Mountain

Mineral Mountain
Cooke City
1/5/2021
Code
SS-N
Latitude
45.03030
Longitude
-109.99800
Notes

New snow: about 6" of fresh in town- from last night.

We observed a few fresh natural avalanches out there today. Photo of one attached: a S, SE aspect on Mineral Mountain. That slide looked to have occurred last night, and is estimated to be around 4-500' wide.

There were also a handful of smaller slab avalanches on NW though NE aspects in the cirque of Mt. Republic, which looked to be more like 36-48 hrs old.

Quite a few large collapses experienced today as well- in the mid and upper elevations.
