

Widespread touchy conditions at Bridger

Date

Mon, 12/30/2024 - 07:05

I recieved a call from BBSP patrol director at 9:50.

They had widespread, hair-[trigger](#) results during avalanche mitigation work.

A lot of slopes avalanched naturally before patrol made it up the mountain.

At 0900 they measured 1.8" of [snow water equivalent](#) (SWE) from the last 24 hours at the Alpine gun mount.

Region

Bridger Range

Location (from list)

Bridger Bowl

Observer Name

Alex Marienthal
