

Many Wind Slab Avalanches Hayden Creek

Date

Sat, 02/15/2025 - 15:45

Activity

Skiing

In Hayden Creek, we saw many D1-D1.5 [wind slab](#) avalanches seen on [leeward](#) slopes- east and northeast slopes at and above treeline. We observed cracking in wind loaded areas above treeline. Dug a pit and did a quick ECT on E facing terrain at 9750ft. HS 190-210. ECTN6 30cm deep. No dirt layer.

Region

Cooke City

Location (from list)

Hayden Creek

Observer Name
