PWL Avalanche in Muddy Creek

Buck Ridge Northern Madison 2/16/2025 Code SS-R3-D2-O Elevation 8700 Aspect E Latitude 45.17190 Longitude -111.38000 Notes

In nearly 45 miles of riding, we noted two avalanches. Both breaking on persistent weak layers a few feet down in the snowpack. The first was a small north-facing pocket in the First Yellow Mule (R1-D1) that was snowmobile triggered. It looked to be around a week old. The second was a larger avalanche (R3-D2), east-facing, deep in Muddy Creek. This was drifted in and likely broke around 2.5 weeks ago during the last significant storm cycle.
