

Natural activity- the Throne

A skier reported seeing multiple recent avalanches near the Throne. They dug a pit and got propagating results

failing at a density change within the new snow. From the email: "Around a foot of wetter, denser new snow (F+) slid on a dryer new snow interface (F-)". Photo: C. Kussmaul

Advisory Region

Bridger Range

Longitude

-110.95W

Latitude

45.88N
