

[Snomobiler triggered avalanche near Round Lake](#)

This slide was triggered on a steep (40 deg) southeast facing slope at Round Lake outside Cooke City. It failed

8" deep on a layer of graupel and small facets. An adjacent hill slid at the same depth beforehand. This layer is not on most slopes, but as this slide shows it is on some. Doug was in the area and dug a pit in the crown soon after it was triggered. Photo: J. Fritz
