Location/Description

Hellroaring

Activity

Skiing

Snow Observations

Observed stable conditions, some pinwheeling and roller balls in the late afternoon on steep direct solar aspects, dry shallow pow on direct N. aspects above 8,000', consolidated melt freeze everywhere else. . Seems like a perfect melt-freeze cycle. Saw lots of highmarking on W. face of Jefferson, Reas Peak, and the Divide w/out slide activity or any movement in general on all but South Facing slopes, which were out of view.
