Snowmobile triggered on Cedar

Cedar Mtn. Northern Madison 1/19/2020 Code HS-R3-D2.5-O Elevation 10000 Aspect NE Latitude 45.22630 Longitude -111.49600 Notes

I was on the west side of Pioneer Mtn digging a pit for YC Ski Patrol. I heard a few groups of snowmobiles cruising around the foothills of cedar. I turned and saw two snowmobilers creating the ridge above the <u>slide</u> pictured as the debris was settling down. The sledders enjoyed the view for a few minutes before turning back the way they came and stumbled upon the <u>slide</u> they had unknowingly triggered. They skirted around the side of the crown and stopped for a few minutes. Based on the height of the rider off his sled, I would estimate the crown to be roughly 10' at its max height. NE <u>aspect</u> below Cedar
