

Heavy snow but non-reactive on Texas Meadows

Date

Mon, 12/26/2022 - 12:40

Activity

Skiing

Toured up to Texas Meadows yesterday, it was spring-like conditions the whole way. We dug a pit at approximately 7600ft on an east aspect, HS was 114cm, and we got an ECTx. There was 10 to 20cm of weak rounds on the ground, and a layer of weaker snow at about 67cm. Our shovel shear broke on the 67cm layer, but it wasn't planar.

Region

Bridger Range

Location (from list)

Texas Meadow

Observer Name

Brian Richards
