

Windy Day in the Bridgers

Date

Tue, 01/07/2025 - 13:05

Activity

Skiing

As my elevation increased, so did the wind. Heavy gusts were moving snow. Clouds were visible and moving fast above Bridger Bowl and Ross peak. Ross Pass was visibly wind scoured.

I didn't observe any natural avalanches in the steep terrain along the ridge between ski area northern boundary and Ross peak, but did notice some ski tracks (I believe in the "Trident, Dog Leg chute").

Region

Bridger Range

Location (from list)

Brackett Creek

Observer Name

Remo Cocco
