

Thin wind slab in Maid of the Mist

Date

Sun, 01/19/2025 - 12:55

Activity

Skiing

Wind was swirling in Maid of the Mist yesterday, mostly upslope winds that were transporting snow, but inconsistently and were difficult to predict where they were loading. We did not find widespread wind loading, but did get a very small windslab to release just below the top of the ridge (max 3-4" thickness, see image).

Region

Northern Gallatin

Location (from list)

Maid of the Mist

Observer Name

Charlie
