

West side Bridger Avalanche

Avalanche on west side of Bridgers behind d-route at Bridger Bowl. Ran full width of path and over the ice climb well into the flats across summer trail. R4-D3. Crown extends out of left side of photo (marked by red arrows). Avalanche ran down the paths in the foreground as well (marked by black arrows). From the ridge late this morning (1/24) we saw multiple large crowns on the west side behind Bridger Bowl. Broke naturally, probably overnight after 1.6" of swe yesterday and moderate westerly winds.
