

## Krispy Kreme glaze in Beehive

From obs.: "A widespread rain crust left the whole [Beehive] basin glazed like a Krispy Kreme donut to ~1000'. The consistently breakable crust thinned with elevation yet ensured lack-luster skiing conditions throughout the entire basin. Light winds [and] increasing cloud cover... worked together to keep solar input at bay and minimized the break-down or softening of the surface crust. Noted 2 small (D.5 - R1) old natural WL avalanches on due south aspects at ~10,100' probably triggered from cliff bands during the warm up last week...." Photo: Zachary Miller
