

Small, intentionally triggered slide

Sawtelle Peak
Centennial Range
12/16/2020
Code
SS-AFc-I
Aspect
SE
Latitude
44.56110
Longitude
-111.44300
Notes

Road cut south facing slope of 42 degrees, triggered intentionally, shows about 12 inches of windblown soft [slab](#) on top of a faceted layer (in this case more extreme due to [aspect](#) and inclination toward the sun) but was triggered only by chopping a hand into the snow a few times. This same faceted layer (the uppermost layer of a thick faceted layer of 1-2 feet) exists throughout the snowpack. Also, the bottom-most layers of snow are very faceted and conditions have not occurred yet to set the snow for a base. Walking around your feet go right to the ground even in areas where snow is 2+ feet deep. There are many rock/tree hazards lurking under the soft snow because of this, two people in our group damaged their a-arms.

Number of slides
1
Number caught
0
Number buried
