

Skier triggered on Flanders, both crowns

We looked at the avalanche in Hyalite that was triggered on Saturday 1/9/21. The slope angle was 33-35 degrees on the starting zone of the lookers right path. It broke 2-3' deep on weak facets below a hard slab, 1000' wide and the debris was 5-9' deep. East aspect, 9,800' elevation. Photo: GNFAAC
