

## Hellroaring Hut

Skiid the into the Hellroaring Drainage 12/29/21-1/2/22. Did not observe any natural slide activity or indicators of instability during the tour into the hut. Snow depth was consistently 130 cm at 8000'. Skiid W & NW aspects up to 35 degree slope angle. Fair structure + Good Strength = Generally Stable Conditions in the Eastern Centennial.

WNW aspect, 8,000' HS 130 cm  
CT3 Q3 @ 20 cm (new snow)  
CT20 Q2.5 @60 cm (new snow)  
ECT-N+
