

Head of White Elephant Canyon

Recent Avalanches? None

Observed Cracking? None

Experienced Collapsing? None

The snowpack is generally quite solid, except for the interface under the storm snow. Use caution on wind loaded slopes that could break at the bottom of the storm snow layer or within the drifted snow [slab](#). Steep slopes can still pose a problem considering the addition of extra weight coming during the next 24 hours.

Activity

Snowmobiling

Date

Thu, 01/06/2022 - 09:00

Location (from list)
