

Cornice triggered avalanche in Beehive

From obs 4/7/22: "We observed a small cornice triggered avalanche (R1-D1.5) from a wind-loaded gully off Peak 10602 that likely slid during or soon after the recent storm cycle. The slide had a crown of approx. 8-15in, and ran ~300ft. ... We also observed several other instances of recent cornice-fall in the basin."
